Dalia Autocut Towel for hand drying

The Dalia Autocut Towel paper is a product with an **extraordinary resistance** (up to 940 N/m when dry or 235 N/m when wet) which allows to pull the paper from a hand drying dispenser without breaking. It **doesn't require proprietary dispensers**, so it's already compatible with most of them. It comes in stackable cardboard boxes, so it's easy to transport and store. And, moreover, its manufacturing process ensures CO₂ neutral emissions. It comes in four varieties:

Recycled kraft autocut towel

Made with mostly recycled fibres from kraft paper, such as cardboard, treated for hygiene.

Recycled pulp autocut towel

Made with mostly recycled fibres from office supplies, treated for hygiene.

EcoTowel autocut towel

Partially made with thermomechanical pulp combined with virgin pulp. It's a great balance between properties and price.

Virgin pulp autocut towel

Fully made with virgin cellulose fibres for premium properties and pristine white look.
